Bilateral Meetings

- Thursday (1:30pm - 6:00pm)
- Friday (9:00am - 12:00pm)
- Friday (12:00pm - 4:00pm)

Description
Tero Ltd (www.tero.gr) is a research and innovation service provider, offering a combination of expertise in business and technology. The services of Tero span the full life cycle of a project, from conceptualisation and strategic planning to project implementation and intellectual property rights management.

Tero has specialised expertise in the fields of collective intelligence platforms, decision support systems, online social networks and digital preservation, acquired through ten years of participation in international and national research projects.
Tero has developed online applications for a variety of domains, such as digital preservation and archiving system, location based services and GIS, social network analytics, and environmental policy support. Tero has also worked on innovation management in research, along the whole chain of research activities from needs discovery, scientific discovery, technology development, demonstration and validation as well as business model development, project financing and the creation of appropriate framework conditions for adoption. Tero has led and participated in management and dissemination activities in more than 20 international projects, developing numerous websites and online promotion campaigns (including social media presence).

Offer

A unified solution for cognitive and physical health for senior citizens.

The LLM platform (http://www.longlastingmemories.eu/) is an integrated ICT platform which: combines state-of-the-art cognitive exercises with physical activity in the framework of an advanced ambient assisted living environment. LLM Integrates two state-of-the-art ICT solutions with physical training equipment, thus delivering innovative ageing-well / independent-living support services for elders.

Cooperation Offered

1. Technical co-operation

Request

Research cooperation for EU programmes (Horizon 2020)

We are interested in collaborating with research institutes / academic organisations for participation in EU programmes, such as Horizon 2020, or other similar EU funding Calls. We offer an open source platform that is able to retrieve and store thematic datasets (e.g. open biomedical data, blog content from biomedical blogs etc.). Using our open source repository and our analytics services, researchers can retrieve valuable information from structured (open data) and unstructured (e.g. blogs) content.
It would be of particular interest to collaborate with research partners within the framework of the following EU Call: H2020-WIDESPREAD-2016-2017 Spreading Excellence and Widening Participation

Keywords: open data repository   open data analytics
Cooperation Requested

1. Technical co-operation

Offer

Creation of thematic (e.g. biomedical) web and social media archives

We would like to work together with biomedical researchers, academics and professionals, to create thematic web archives of their interest. Nowadays there are a lot of web resources (e.g. blogs, websites, social media) available for discussions and exchange on biomedical issues. We offer the possibility to prepare a thematic web repository that will include web and social media content from different sources and will act as a single access point to valuable information. Our public access web archiving mechanism provides facilities to preserve, organise, view, query & reuse the web and social media content to an unprecedented degree of detail.

Our clients are able to select the web and social media sources they wish to archive and manage these collections through our (Webternity) platform. The platform's sophisticated search engine assists users to easily navigate around

the archives and find what they are looking for (filtering for author, title, year etc.). Users are also able to cite web sources as these links will remain active for ever.

Cooperation Offered

1. Technical co-operation
2. Outsourcing co-operation
